# Contents

<i>Preface</i>	<i>page</i> 1
<b>1 Nanoplasmonics</b>	6
1.1 Localized plasmon resonance	6
1.1.1 Definitions	6
1.1.2 Dipolar metal nanoparticle	8
1.1.3 Band energy diagram of metals	13
1.1.4 Optical cross sections	14
1.1.5 Influence of the particle size: retardation effects	16
1.1.6 Influence of the particle morphology	18
1.1.7 Influence of the surrounding medium	20
1.1.8 Influence of the temperature	21
1.2 Gold and other materials in plasmonics	22
1.2.1 Why gold?	22
1.2.2 Other materials in plasmonics (heteroplasmonics)	25
1.2.3 Quality factors and figures of merit of plasmonic materials	29
1.2.4 How reliable are optical constant data sets?	38
1.3 Getting started in thermoplasmonics	40
1.3.1 Introduction	40
1.3.2 Which sample?	40
1.3.3 Which microscope configuration?	40
1.3.4 Which laser?	41
References	42
<b>2 Thermodynamics of metal nanoparticles</b>	48
2.1 Mechanisms and governing equations	48
2.1.1 Heat generation	48
2.1.2 Diffusive heat transfer	52
2.1.3 Convective heat transfer	54
2.1.4 Thermal radiation	55
2.2 Steady state	57
2.2.1 Thermal point source	57

---

2.2.2	Spherical metal particle	59
2.2.3	Spherical nanoparticle with a Kapitza resistance	61
2.2.4	Presence of a substrate	62
2.2.5	Multiple nanoparticles, collective effects and thermal homogenization	65
2.2.6	Two-dimensional heat-sources	67
2.3	Transient evolution	70
2.4	Harmonic heating	72
2.4.1	Thermal point source	73
2.4.2	Spherical metal nanoparticle	74
2.4.3	Multiple nanoparticles	79
2.5	Pulsed Heating	80
2.5.1	What's happening <i>inside</i> the nanoparticle	81
2.5.2	What's happening <i>outside</i> the nanoparticle	88
2.6	Summary	97
	References	98
<b>3</b>	<b>Numerical simulation techniques</b>	101
3.1	Absorption cross section of a nanoparticle	101
3.1.1	Spheres (Mie theory)	101
3.1.2	Ellipsoids (Mie-Gans theory)	104
3.1.3	Nanoparticles of arbitrary morphology	105
3.2	Temperature of a nanoparticle in the steady state	109
3.2.1	Spheres	109
3.2.2	Ellipsoids and spheroids	110
3.2.3	Discs and rods	112
3.2.4	Nanoparticles of arbitrary morphology	113
3.3	Temperature anywhere, and not necessarily in the steady state	116
3.3.1	Spheres in transient regime	116
3.3.2	Nanoparticle of arbitrary morphology	116
3.3.3	Multiple nanoparticles	118
	References	122
<b>4</b>	<b>Thermal microscopy techniques</b>	124
4.1	Introduction	124
4.2	Fluorescence microscopy	128
4.2.1	Fluorescence polarization anisotropy	129
4.2.2	Fluorescence intensity	132
4.2.3	Fluorescence spectroscopy	134
4.2.4	Excited state lifetime imaging	142
4.2.5	Fluorescence correlation spectroscopy	144

---

4.3	Microwave spectroscopy of nanodiamonds	147
4.4	Techniques sensitive to refractive index variations	153
4.5	Raman scattering spectroscopy	158
4.6	X-ray absorption spectroscopy	161
4.7	Scanning thermal microscopy	162
4.8	Other techniques	164
4.9	Conclusion	166
	References	166
<b>5</b>	<b>Thermal-induced processes</b>	<b>173</b>
5.1	Chemical reaction	173
5.2	Brownian motion	175
5.2.1	Mobility	175
5.2.2	Particle diffusivity	175
5.2.3	Link between mobility and diffusivity: the Einstein relation	175
5.2.4	Brownian motion	176
5.3	Thermophoresis	176
5.3.1	Basics of thermophoresis	176
5.3.2	Thermophoresis: motion from hot to cold or the opposite?	178
5.3.3	Does thermophoresis exist with an ideal gas?	178
5.3.4	Thermophoresis of dissolved ions in water	180
5.3.5	Thermophoresis of colloids and macromolecules	184
5.3.6	Applications based on laser-assisted microscale thermophoresis	194
5.4	Liquid superheating and liquid–gas phase transition	196
5.4.1	Origin of liquid superheating in plasmonics	197
5.4.2	Difference between cw and pulsed illumination for the liquid–gas phase transition	204
5.5	Bubble dynamics, general considerations and physical laws	205
5.5.1	General considerations on boiling and bubbles	205
5.5.2	Laplace pressure	206
5.5.3	Henry’s law	206
5.5.4	Bubble dynamics: the Rayleigh-Plesset equation	207
5.6	Bubble formation and dynamics under pulsed illumination	208
5.6.1	Scenario of bubble’s life	208
5.6.2	Detection techniques of nano-bubbles	209
5.6.3	Fluence threshold for bubble formation	215
5.6.4	Bubble size	222
5.6.5	Bubble lifetime	225

---

5.7	Bubble formation and dynamics under cw illumination	228
5.7.1	Scenario of bubble's life	228
5.7.2	Air bubble instability	230
5.7.3	Air bubble shrinkage and lifetime	231
5.7.4	Air bubble steady state upon heating	235
5.7.5	Air bubble growth under illumination	239
5.7.6	A recent research thematic	239
5.8	Stress wave generation	243
5.8.1	Definitions	243
5.8.2	Mechanisms	244
5.8.3	History	245
5.8.4	Mechanical effects of laser-induced stress waves in biology	248
5.9	Refractive index variation	248
5.9.1	$dn/dT$ of common materials	248
5.9.2	The case of water	250
5.10	Fluid convection	252
5.11	Reshaping of nanoparticles	254
5.12	Thermal radiation	257
	References	259
<b>6</b>	<b>Applications</b>	<b>268</b>
6.1	Protein denaturation: the very first application of thermo- plasmonics (1999)	268
6.2	Plasmonic photothermal therapy (PPTT)	269
6.2.1	Hyperthermia for cancer therapy	270
6.2.2	Hyperthermia using plasmonic nanoparticles	270
6.2.3	History of PPTT	272
6.2.4	Remaining current challenges in PPTT of cancer	277
6.2.5	PPTT of atheroma	279
6.2.6	PPTT of acne	279
6.3	Drug and gene delivery (DGD)	280
6.3.1	Principle of DGD	280
6.3.2	History of plasmonic photothermal DGD	280
6.4	Heat-assisted magnetic recording (HAMR)	283
6.4.1	History of HAMR	283
6.4.2	Remaining issues in near-field assisted HAMR	291
6.5	Photoacoustic imaging (PAI)	291
6.5.1	Principle of PAI	291
6.5.2	History of PAI	293
6.6	Nanochemistry	299

---

6.6.1	Plasmon-assisted chemical vapor deposition (PACVD)	302
6.6.2	Thermoplasmonic-assisted catalysis in gas phase	303
6.6.3	Thermoplasmonic-assisted catalysis in liquids	304
6.6.4	Unidentified thermal effects in PINC	306
6.7	Photothermal imaging (PTI)	309
6.7.1	Principle of PTI	310
6.7.2	Experimental configurations	311
6.7.3	Theories of PTI	313
6.7.4	History of PTI	315
6.7.5	Conclusion	319
6.8	Thermoplasmonics for cell biology	319
6.8.1	History thermoplasmonics for cell biology	320
6.8.2	Conclusion	323
	References	324
<b>Appendix A</b>	<b>Dimensional analysis</b>	<b>337</b>
<b>Appendix B</b>	<b>Thermodynamical constants</b>	<b>339</b>
<b>Appendix C</b>	<b>Thermal Green's function for a three-layer system</b>	<b>342</b>
	<i>Index</i>	345
